

AMENDMENTS TO THE SPECIFICATION

Please amend the specification at the paragraphs appearing at the following noted pages and lines and wherein matter to be deleted is shown in dashed line and matter to be added is shown in underline.

At page 11, lines 10- 16:

A suitable length of hose 18 having a smooth outer wall is secured to the spray head 12 and is deployed and stored at a hose spool or collection reel assembly 20. The hose 18 is constructed to withstand the normal anticipated working conditions and pressures. The hose 18 is typically constructed of several layers of water impermeable material in numerous wound wrappings and may contain wraps or bands of wire, KEVLAR and the like. The diameter of the hose 18 can be adjusted as desired (e.g. 1/8 to 1 inch) depending upon the application, diameter of tube 18 and desired working pressures.
